SPORT BRAKE DISC FACT SHEET

RELIABLE ON THE ROAD, SUPERIOR ON THE TRACK

Sport Disc Overview

The Brembo Sport brake discs are the ideal product for enthusiasts for both normal road use as well as high-performance driving. A solution that combines a unique style, excellent performance and the ease of use of a plug-and-play product which is fully interchangeable with OE discs.

Product Features:

• **Higher friction coefficient** with Type3 slotting ensuring that the friction material, or the pad's surface, is kept clean and renewed. Drivers experience more responsive and consistent braking with improved braking performance and modularity.
• **Capable on wet surfaces** because of Type3 slotting that prevents water from forming on the braking surface during rainy conditions. Combats the inefficiency of rainwater buildup that reduces pad grip on the disc.
• **Improved brake feel** compared to an OE disc, guaranteeing smoother brake pedal feel, improved performance, stability, and resistance to fade. Purpose-built for sporty drivers.
• **All-new graphic design packaging,** robust, durable and uniquely aligned with Brembo's value proposition

Design + Motorsport Heritage

- **Instantly identifiable** discs set apart by their fifteen plus slots of different lengths and depth, designed and placed intentionally based on years of research and prototypes.
- **The Brembo logo** is featured on the braking surface to create a distinctive connection to the Brand.
- **Racing Feel** is central to the design, resembling the discs used in most competitive motorsport championships, including GT and endurance championships such as the 24 Hours of Le Mans and is currently used in the WTCR World Championship.

Use Case

For sportier driving, the Sport brake discs combine the **durability of the best road discs** with **superior performance** for moderate track use.
